

RESOLUTION OF THE ELEVENTH INTERNATIONAL CONFERENCE  
OF DATA PROTECTION COMMISSIONERS OF 30 AUGUST 1989  
ABOUT THE WORKING GROUP ON "MEDIA"

- When drafting the resolution on ISDN the delegation had a first, fruitful exchange of information.
- When we express opinions or make decisions on our countries, we have to take into account the international dimension of telecommunication networks and services.
- Information on events taking place beyond our national borders can not be provided to us by our national operators only.
- Networks and services do not always develop at the same time and at the same place in our countries.
- Experience has shown that the efficiency of data protection in this field depends - beyond mere principles - on practical measures and this is not always easy to obtain from our national operators.

This is why the Conference agrees that this Working Group should continue its work in Berlin.

Each delegation should have the opportunity to present its experiences in detail (analysis of the problems, possible solutions, adopted solutions) particular in the following fields:

- detailed bills
- provisions regarding the listing of subscribers in directories and the use of directories
- the different categories of telematic services (electronic mail, teleshopping, information services)
- telemetry
- ISDN
- cellular telephone (digital car telephone)
- automatic prerecorded message device
- network security
- interactive TV cable networks.
