Customer Satisfaction Performance

Customer Satisfaction Performance

Apple continues to be ranked highest in overall satisfaction among the covered smartphone manufacturers with an index score of 795, scoring 32 index points above its closest competitor, Motorola. In addition, Apple performs 34 index points significantly above the industry average of 761. Apple, as was the case in previous volumes, excels in four of five factors, scoring highest in Ease of Operation (826), Operating System (769), Physical Design (831) and Features (821). However, Apple does fall significantly below the industry average in Battery Function (619 vs. 651).

Among the remaining smartphone manufacturers, highlights include:

Motorola ranks second overall with an index score of 763, slightly above the industry average (761). Motorola ranks significantly higher than the industry average in the Operating System (749) and Features (792) factors. Motorola has an opportunity to improve within the Physical Design factor (777), as the manufacturer scores significantly below average in this particular aspect.

HTC ranks third overall (762), 1 index point below second-highest-ranked manufacturer, Motorola, and 1 index point above the industry average. HTC smartphone owners indicate they are significantly more satisfied than the industry average in Physical Design (808) and Features (789), whereas HTC is significantly below average in Ease of Operation (777) and Battery Function (615).

Palm scores significantly 25 index points lower than the industry average with a score of 736, which is actually an 11-point improvement from 2010 Vol. 2. The manufacturer is significantly below the industry average overall and in two of five factors: Ease of Operation (757) and Features (726).

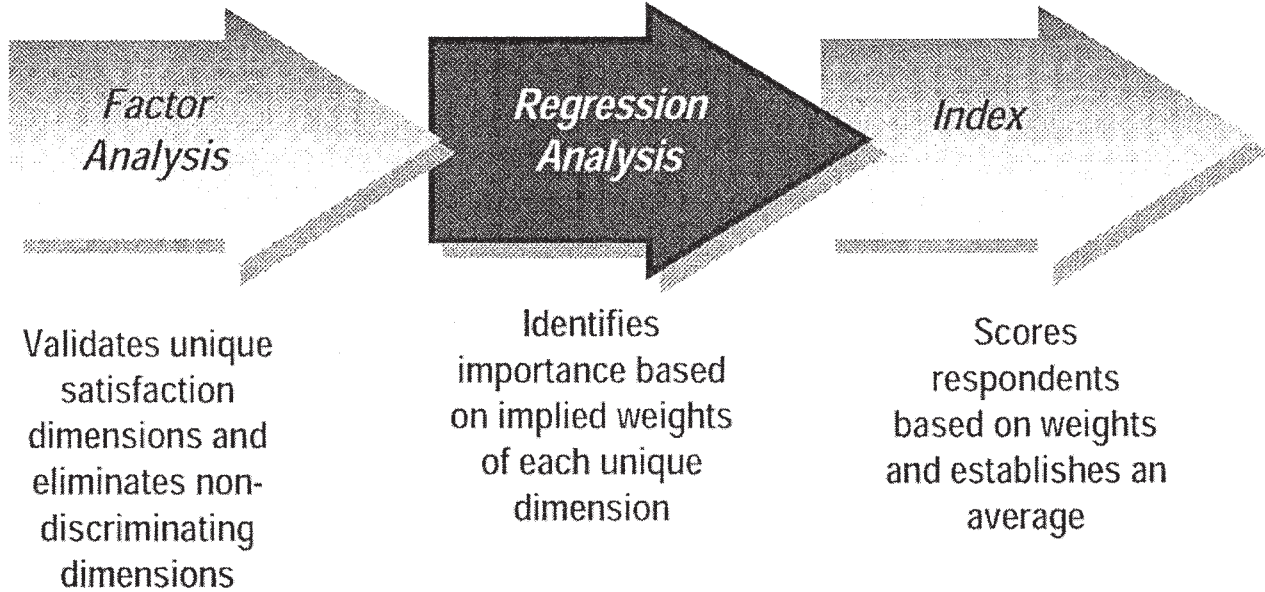

Nokia ranks fifth overall, in a tie, with a score of 734, falling significantly below the industry average. Although Nokia ranks significantly above the industry average in Battery Function (737), it is significantly below average in the remaining four factors: Ease of Operation (752), Operating System (691), Physical Design (761), and Features (727).

Samsung ranks fifth place, in a tie, in 2011 Vol. 1 with a score of 734 overall. The manufacturer is significantly below the industry average by 27 index points. Samsung struggles significantly in four factors: Ease of Operation (756), Operating System (688), Physical Design (780) and Features (741). Satisfaction with the Battery Function stands above average (656 vs. 651).

RIM BlackBerry falls from its fourth place ranking in 2010 Vol. 2 to being the lowest-ranked manufacturer in 2011 Vol. 1 with an overall index score of 732, a significant 29 index points below the industry average. RIM BlackBerry smartphone owners are significantly more satisfied than the industry in Battery Function (702), despite being significantly below average in the remaining four factors.

Wireless Smartphone CSI Summary

Question Topics Used to Determine Factors

Ease of Operation (26%)

- Quality of sound when on a call (16%)
- Ease of pressing/activating keypad/keyboard buttons (15%)
- Ease of navigating phone using touch screen, toggle/navigation wheel (15%)
- Ability to adjust volume to suit needs (14%)
- Ease of navigating around phone menu system (14%)
- Ease of using basic calling features (13%)
- Ease of using text messaging (13%)

Operating System (24%)

- Reliability/stability of smartphone operating system (33%)
- Speed of mobile Internet (20%)
- Amount of time it takes to move between applications (19%)
- Timeliness of syncing (16%)
- Amount of time it takes to attach/transfer files (12%)

Physical Design (23%)

- Visual appeal of your wireless phone (22%)
- Size of display screen (20%)
- Brightness of background display screen lighting (20%)
- Weight of wireless phone (including battery) (19%)
- Size of wireless phone (19%)

Features (19%)

- Usefulness of applications available on phone (26%)
- Ability to download additional applications (21%)
- Availability of multimedia functions (20%)
- Quality of camera pictures and videos (17%)
- Variety of ring tones supported (16%)

Battery Function (8%)

- Amount of battery life before it needs recharging (53%)
- Length of time needed to recharge battery (28%)
- Ease of replacing batteries (19%)

Overall Smartphone CSI Rating

For handsets used for less than 2 years.

-  = Significantly ABOVE Industry Average at 95% Confidence Level (excluding manufacturer).
-  = Significantly BELOW Industry Average at 95% Confidence Level (excluding manufacturer).

Smartphone CSI Ratings by Manufacturer

	Industry Avg.	Apple	Motorola	HTC	Palm	Nokia	Samsung	RIM BlackBerry
