

Exhibit 30
(Submitted Under Seal)

	A	B	C	D	E
1					
2	Analysis of Galaxy tab Operation Speed and Screen Effects				
3					
4		No.	Application	Category	Content
5		1	Music	Performance	On Artist Tab, the response speed is slow when moving Split horizontally
6		2	Music	List Scroll	On Album, Songs, scrolling is not smooth
7		3	Music	List Bounce	On Album, Songs, Bounce effect has no emotional impact
8		4	Music	Screen Switch (black screen)	When sharing mp3 files through Share via, black screen is displayed when screen switch occurs
9		5	Music	Graphic effect	On Album Tab, the Album Popup effect is awkward
10		6	Music	Screen Switch (insufficient effect)	After selecting the file to share from Share via, no effect exists to indicate the transfer to the shared device - refer to an effect similar to that of iPad Mail transfer
11		7	Music	Graphic effect	When deleting music files, the screen blinks -uncertain as to which file was deleted
12		8	Music	Graphic effect	When checking the list from Add to Playlist, the momentary blinking effect of Focus is awkward
13		9	Calendar	Screen Switch (black screen)	When opening Calendar, the entire screen blacks out first, then the Calendar screen fades in to appear
14		10	Calendar	Performance	When using the bottom area of the Day/Week/Month screen to move dates, the page is scrolled horizontally, and this screen transition is not smooth.
15		11	Calendar	List Scroll	Scrolling of the List view is not smooth
16		12	Calendar	Screen Switch (consistency)	Screen switch has no consistency - when executing Create > back, the Fade out effect shows; when executing Menu > Settings > back, the sliding effect shows.
17		13	Contact	Screen Switch (black screen)	When opening Contacts, the entire screen blacks out first, then the screen fades in to get displayed
18		14	Contact	Performance	When selecting an item from a Group included in the Group List, the resulting screen switch is unnatural - the Category List on the left-hand side scrolls to the left after the fade-out animation occurs but this is not smooth

	A	B	C	D	E
19		15	Contact	List Scroll	In scrolling Favorites/ Groups/ Contacts List, items (unintentionally) get selected.
20		16	Contact	List Bounce	In scrolling Favorites/ Groups/ Contacts List, the Bounce effect has no emotional impact.
21		17	Contact	Screen Switch (insufficient effect)	When adding to Contacts, there is no screen switch effect and the screen blinks (iPad provides a screen switch effect). It switches to a completely different looking screen.
22		18	Contact	Graphic effect	When selecting an item from Contacts List to edit, iPad provides an Edit screen, pushing the existing screen to the left to give continuity, but P1 switches the entire screen with the sliding effect.
23		19	Contact	Graphic effect	After entering the Edit mode, when deleting the items from List, the items being deleted disappear all at once without any effect, which makes it feel unemotional
24		20	Contact	SIP Animation	When adding a new contact, SIP Call/Hide animation is not smooth.
25		21	Dialer	SIP Animation	When entering the Create Message screen, the appearing SIP animation blinks
26		22	Memo	SIP Animation	When creating a Memo, the SIP animation called for blinks.
27		23	Memo	Graphic effect	When selecting a created Memo and switching the page, the sliding effect has been applied but it is not visibly noticeable.
28		24	Memo	Graphic effect	When deleting a created Memo, such deletion occurs without any effect and thus has no emotional impact
29		25	Memo	List Bounce	On the Memo detail view screen, no Bounce effect is provided and thus is unemotional
30		26	Video	Screen Switch (insufficient effect)	From the vertical mode, when executing the Video function from Thumbnail list, the resulting screen effect is awkward.
31		27	Video	Screen Switch (black screen)	When returning to the List after Video play ends, a black screen appears first, then switches to the List screen.
32		28	Video	List Bounce	Upon releasing the List screen after dragging it, the Bounce effect is provided with no regard to speed, so it has no emotional impact.
33		29	Video	Screen Switch (insufficient effect)	Selecting from mosaic Thumbnail screen to return to Video Player, no screen switch effect exists. Need animation to seamlessly connect to Video Player as Thumbnail expands
34		30	Phone	Screen Switch (black screen)	When entering the Phone, a black screen first appears then the Apps screen is displayed.
35		31	Internet	Performance	In screen-scrolling/panning, the screen intermittently gets cut off and is not smooth.
