

This PDF file is an excerpt from *The Unicode Standard, Version 4.0*, issued by the Unicode Consortium and published by Addison-Wesley. The material has been modified slightly for this online edition, however the PDF files have not been modified to reflect the corrections found on the Updates and Errata page (<http://www.unicode.org/errata/>). For information on more recent versions of the standard, see <http://www.unicode.org/standard/versions/enumeratedversions.html>.

Many of the designations used by manufacturers and sellers to distinguish their products are claimed as trademarks. Where those designations appear in this book, and Addison-Wesley was aware of a trademark claim, the designations have been printed in initial capital letters. However, not all words in initial capital letters are trademark designations.

## I.1 Unicode Names Index

The Unicode Names index contains three types of entries.

- Formal character names—all uppercase
- Alternative character names (aliases)—all lowercase
- Character group names—mixed case (titlecase)

Formal character names are unmodified from the character names lists, although the name strings may be indexed by different words in the names. Alternative character names and character group names are occasionally modified slightly to make them understandable out of context (for example, from “Hangul” to “Korean Hangul”).

Not every character is indexed. Large groups of similar characters, including CJK ideographs, Korean Hangul syllables, and compatibility characters, are indexed by their character group names, such as block names, subblocks, alphabet names, relevant standards, or group summaries (for example, “Roman Numerals”).
