STOP HACK ATTACKS

Data breaches are on the rise and often stem from social engineering (someone posing as someone else and tricking people into sharing confidential information).

To keep hackers out:

• Think twice before providing information – confirm the requestor's identity first.

• Know that we won't unexpectedly use email, phone or text to ask you to share sensitive information or wire money.

• Use caution with social media – quizzes and challenges could be used to gather your information.

If you get a call, email or text that doesn't seem right, don't provide any information. Notify an internal resource immediately. You could help stop a breach before it starts.
