

# Getting Your Team Started With NVIDIA and Generative AI

Generative AI has limitless potential. It can augment your workforce by automating processes, significantly increasing productivity. It can summarize and analyze data, provide first drafts of reports, generate code, and reveal customer insights.

However, many companies don't know how to begin their journey with generative AI, as new tools, models, and software are constantly being developed. The good news is you don't have to go from zero to full speed immediately. There are various ways to familiarize yourself with the technologies to identify the solutions that best suit your needs.

Here are four steps to get started:

## Explore

Begin by exploring how **generative AI technologies** can benefit your business. With **NVIDIA NGC™**, a portal of enterprise services, software, tools, and support, your team can delve into different gen AI applications with ease. Learn about fully managed services, or use performance-optimized software to build and deploy solutions on cloud, on-prem, and edge systems.

**NVIDIA AI Foundation models** let you engage with gen AI models from a browser without any setup. You can customize these models and take them to production with NVIDIA AI Enterprise.

## Enroll

Transform your workforce through the development of key skills and hands-on experience. Choose from bundled self-paced online and live courses, instructor-led workshops, executive briefings, and enterprise-level reporting. **NVIDIA Training** offers comprehensive AI training and certification. Our **generative AI learning paths** include customized curriculum for both developers and administrators.

## Experience

Test, prototype, and deploy your own applications and models against the latest and greatest that NVIDIA has to offer. Get started with an NVIDIA AI workflow reference example, and then try it out on **NVIDIA LaunchPad**.

NVIDIA LaunchPad provides free access to enterprise NVIDIA hardware and software through an internet browser, letting you experience the power of AI with end-to-end solutions through guided hands-on labs or as a development sandbox.

## Evaluate

See firsthand how to streamline the development and deployment of generative AI in your own environment. Our free, 90-day evaluation license lets you try NVIDIA AI Enterprise, an end-to-end, cloud-native software platform, on your compatible on-premises system or in the cloud.
