

# Google Chrome Browser

## Proactive security **without slowing productivity.**

Chrome Browser provides secure, trusted access to data, apps, and cloud services, connecting employees on any device to a new generation of powerful tools for work. With proactive security measures protecting them while they work, users get a consistent, customizable experience whenever and wherever they access it. And IT administrators can maintain control by easily managing permissions and policies across every user, device, and platform in the enterprise, including Windows, Mac OS, iOS, Android, and Linux.

### Protect users as they do more in the cloud.

With Chrome Browser, IT leaders are equipped to address emerging vulnerabilities, as robust safeguards and built-in protections deflect threats and shield business data from potential breaches.

Features such as safe browsing, sandboxing, auto-updates, and support for additional authentication work to keep employees safe as they do more in the cloud. IT can leverage Group Policy to apply more than 300 policies to manage access, updates and more.

#### Safe Browsing:

Built-in warnings and notifications help ensure users follow the security standards set by Chrome Browser and avoid mistakenly visiting infected sites.

#### Security Keys:

Support multi-factor authentication, including verification by physical touch to prevent from virtual takeovers on sensitive apps and websites.

#### Sandboxing and Site Isolation:

Isolate tabs and processes to contain potential threats before they spread.

#### Auto Updates:

Reduce the heavy lifting of patching with automatic security updates that run constantly in the background to protect users without getting in their way while they're working online. Enterprises can also choose to manage their updates through policy.

#### Blacklisting and Whitelisting policies:

Enforce policies across a wide range of criteria to control which types of websites, apps, and extensions can be accessed by users.
