Tor Browser

The screenshot shows the Tor Browser window with the title "Are you using Tor? - Tor Browser". The address bar displays "torproject.org" and the URL "https://check.torproject.org/?lang=en-US&small=1&uptodate=1". A dropdown menu is open over the Tor logo, listing "New Identity", "Cookie Protections", "Preferences...", and "About Torbutton...". The main content area features a large green message: "Congratulations. Your browser is configured correctly." Below this, it says "Please refer to the [Tor website](#) for further information about using Tor safely. You are now free to use the network." The IP address "95.170.88.81" is displayed. At the bottom, there is a list of available languages: العربية (Arabiya), Burmese, český, dansk, Deutsch, Ελληνικά (Ellinika), English, español, Estonian, فارسی (Fārsī), suomi, français, Italiano, (Nihongo), română, Русский (Russkij), Thai, Türkçe, українська (ukrajins'ka), Vietnamese, and others.

[API](#)

[Development](#)

Welcome to Stem!

Stem is a python controller library for **Tor**. Like its predecessor, **TorCtl**, it uses Tor's **control protocol** to help developers program against the Tor process, enabling them to build things similar to **Vidalia** and **arm**.

Obfsproxy

Flashproxy

INTERNET FREEDOM

Dark blue means the proxy is running but no client is being served.

INTERNET FREEDOM

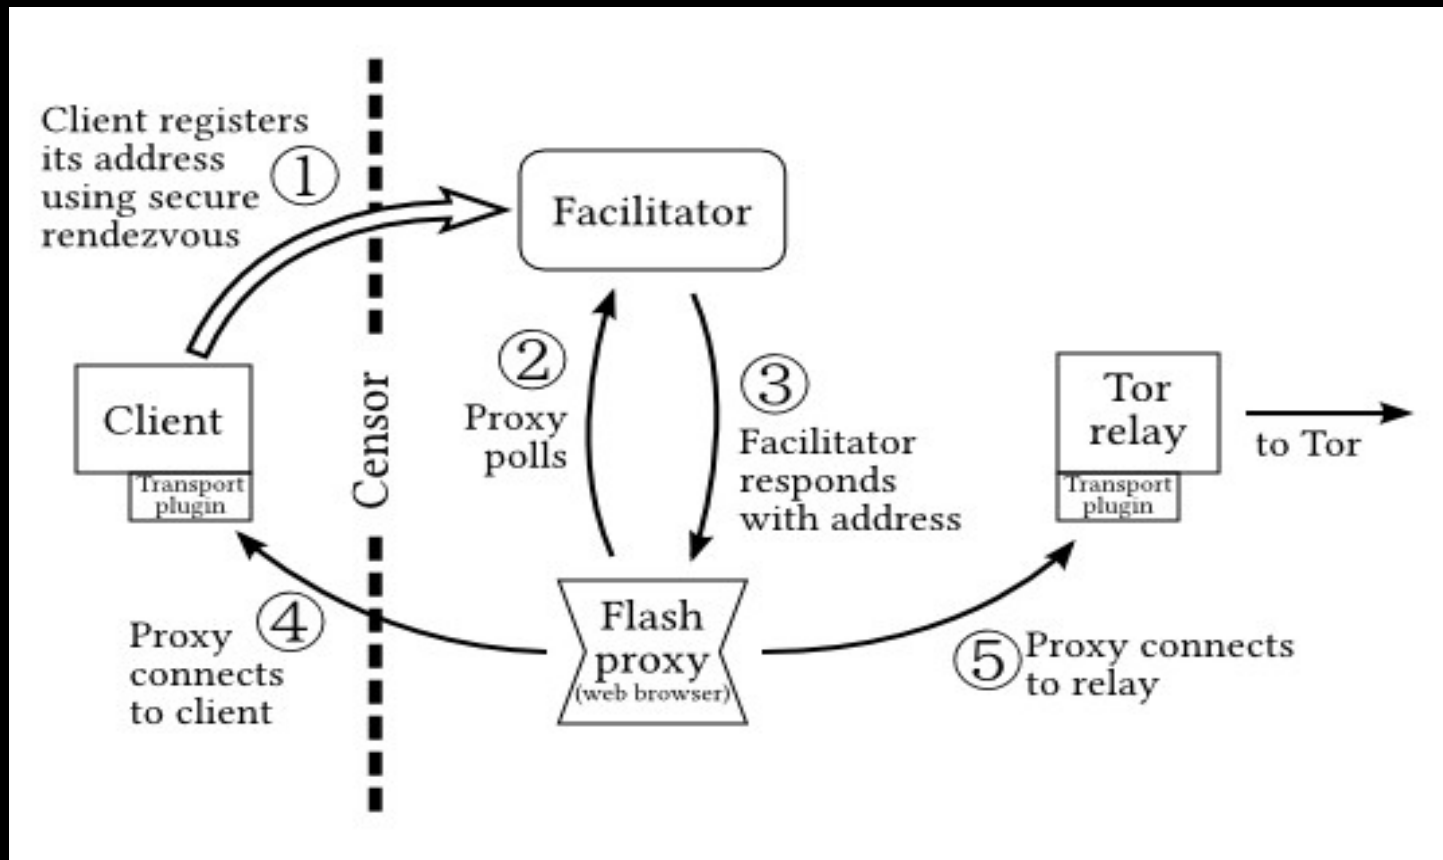

Light blue means a client is currently being served.

INTERNET FREEDOM

Gray means that the badge has disabled itself. This can be because it has detected it is running on a mobile device, or the browser doesn't support WebSocket (this happens on Internet Explorer 9).

INTERNET FREEDOM

Black means that there was an internal error and the proxy is no longer running.

Torbirdy

Tor Cloud

[فارسی](#)[What Is It?](#)[Get Started!](#)[FAQ](#)

Tor Cloud

————— Tor bridges in the Amazon cloud —————

The Tor Cloud project gives you a user-friendly way of deploying bridges to help users access an uncensored Internet. By setting up a bridge, you donate bandwidth to the Tor network and help improve the safety and speed at which users can access the Internet. [Learn more about Tor and bridges »](#).

This project runs on the Amazon EC2 cloud computing platform, which powers Amazon.com and other major websites. Amazon EC2 allows users to launch their own virtual machines and computing resources with flexible and cost-effective terms. [Learn more about Amazon EC2 »](#)

Setting up a Tor bridge on Amazon EC2 is simple and will only take you a couple of minutes. The images have been configured with automatic package updates and port forwarding, so you do not have to worry about Tor not working or the server not getting security updates. [Get started with Tor Cloud »](#)

Tor-ramdisk

NOTE: Only ftp supported at present

Enter IMPORT or GENERATE (all upper case): GENERATE
A new secret key will be generated when tor is started ...

<Tor is configured (but not started yet)>

Hit enter to continue:

- * Enter "netstart" to (re)configure the network
 - * Enter "netstatus" to see the network status
 - * Enter "nettest" to test network connectivity
 - * Enter "listening" to see sockets listeing on the network
 - * Enter "established" to see sockets established on the network
 - * Enter "torconf" to (re)import/generate the secret_id_key/torrc
 - * Enter "torstart" to (re)start tor.
 - * Enter "torreload" to reload torrc.
 - * Enter "torstop" stop the tor server.
 - * Enter "tolexport" to export the secret_id_key/torrc and NOT halt the system.
 - * Enter "processes" to see all the running processes
 - * Enter "resources" to see ram usage
 - * Enter "shutdown" to export the secret_id_key/torrc AND halt the system.
- * torstart_
