

Containerized adapters

New course!

As of ACP Release 5.1, some ACP adapters will be de-released and a containerized version will be made available. This means that if a client upgrades to Release 5.1 or higher, these adapters should be set up and configured in the Avaloq Container Platform Reference (ACPR).

We will provide a one-day accreditation course from September onwards covering how this should be done for the following adapters:

JMS Adapter

SOAP Adapter

File Transfer Adapter

Total Messaging Adapter / IGT Adapter

Financial Information eXchange FIXBridge - Client

Upgrading Academy's EDU environment

To keep pace with the ongoing digital transformation, we are investing more time in making our education environment (EDU) more robust and stable. As containerized products are increasing, we are automating certain background processes and upgrading the Academy cluster so we can provide more container-centric courses.

We've gone interactive!

In our constant pursuit to improve your learning experience, we have introduced new technologies to bring you interactive lessons and software simulations.

Try it out!
