

New course!

CAPIsce?

Following the **Delta 2020 H2** topic reveal in our June newsletter, now it's time to learn and apply the underlying concepts of the **Avalog Community APIs (CAPIs)**. We have prepared theory and demo videos, supported by quizzes and hands-on exercises to reinforce your learning.

CAPIs are implemented in a containerized way, managed with OpenShift and Kubernetes. If you'd like to learn how the **Avalog Container Platform Reference (ACPR)** works, check out Delta 2020 H1. We've added new course dates because you asked!

Avalog Wealth introduction

New course!

You are sure to have heard of the **SDPs or Standalone Digital Products**. We will explore the different product lines in the coming months. This quarter, we will focus on Avalog Wealth which **delivers wealth management services to bank clients**. Avalog Wealth facilitates the entire investment value chain on a **single technical platform**. It provides out-of-the-box "desks" containing sets of capabilities tailored to relevant personas.

This **introductory course** covers investment advisory and model portfolio construction use cases including their respective processes. We have also added a high-level product-line overview and architecture to provide a holistic view of the SDPs.

It's time to Rise.

We're implementing Rise 360 to improve the user experience of our courses.
