

Extend internet protection to remote worker, contractor or student devices at non corporate sites with AT&T Content Delivery Network - Enterprise Traffic Protector (ETP).

ETP is available for free customer trials and at special pricing. [See qualifying details below.](#)

ETP offer:

Security

- Block ransomware, malware, and phishing delivery
- Block Command & Control (C&C) requests
- Protect against DNS data exfiltration, DNSspionage, pharming, trojans, and lexical attacks
- Deploy advanced anti-virus and malware detection for HTTP and HTTPS traffic
- Provide In-line payload analysis and file scanning

Convenience:

- Easy to configure – takes less than two hours to deploy, provision, and scale
- Low number of false positives makes it easy to manage
- Enforce uniform compliance and internet use policies – block access to inappropriate domains and content

Promotional offer:

- All new ETP customers can try the service free for the first month, and get an additional month free with a 13-month commitment
- Service discount of up to 25%

Extend internet protection to remote worker, contractor or student devices at non corporate sites.

Enterprise Traffic Protector (ETP) helps to proactively identify and block security threats such as ransomware, malware, and phishing.

These threats increase as hackers become better at circumventing security measures. ETP, built on our global platform and carrier-grade Domain Name System (DNS), utilizes global security monitors to proactively arm security teams with the ability to mitigate targeted threats as well as create, deploy, and enforce unified security and acceptable use policies (AUPs). ETP is an easy-to-deploy cloud solution requiring no new hardware or software to maintain. All outgoing traffic is protected against attacks by a cloud security platform that provides enhanced protection with low false positives. The ETP service can be provisioned in less than 2 hours.
