Date February, 2006

This report is released to inform interested parties of research and to encourage discussion. The views expressed on statistical, methodological, or technical issues are those of the authors and not necessarily those of the U.S. Census Bureau.

## **Acknowledgments**

This working paper was prepared in Population Division. The authors thank Frank Hobbs, Cynthia Davis, Paul Mackun, and Phil Gbur for their review and comments.

## **Abstract**

This working paper presents selected decennial census data on the foreign-born population of the United States from 1850 to 2000.

## **Other reports on historical census statistics for the United States**

The following six reports present historical census statistics that are more detailed and/or more recent than historical census statistics published in reports from the decennial census of population or in Historical Statistics of the United States: Colonial Times to 1970 (U.S. Bureau of the Census, 1975a).

Population of States and Counties of the United States: 1790 - 1990, by Richard L. Forstall. U.S. Bureau of the Census. Washington, DC: U.S. Government Printing Office, 1996. Data for the 1900 to 1990 period are available also on the Census Bureau's Internet site at <[www.census.gov/population/www/censusdata/hiscendata.html](http://www.census.gov/population/www/censusdata/hiscendata.html)>.

Population of the 100 Largest Cities and Other Urban Places in the United States: 1790 to 1990, by Campbell Gibson. U.S. Bureau of the Census, Population Division, Working Paper No. 27, 1998. Available also on the Census Bureau's Internet site at <[www.census.gov/population/www/censusdata/hiscendata.html](http://www.census.gov/population/www/censusdata/hiscendata.html)>.

Historical Census Statistics on the Foreign-Born Population of the United States: 1850 to 1990, by Campbell Gibson and Emily Lennon. U.S. Bureau of the Census, Population Division, Working Paper No. 29, 1999. Available also on the Census Bureau's Internet site at <[www.census.gov/population/www/censusdata/hiscendata.html](http://www.census.gov/population/www/censusdata/hiscendata.html)>. This report (No. 29) is superseded by the current report.

Historical Census Statistics on Population Totals by Race, 1790 to 1990, and by Hispanic Origin, 1970 to 1990, for the United States, Regions, Divisions, and States, by Campbell Gibson and Kay Jung. U.S. Census Bureau, Population Division, Working Paper No. 56, 2002. Available also on the Census Bureau's Internet site at <[www.census.gov/population/www/censusdata/hiscendata.html](http://www.census.gov/population/www/censusdata/hiscendata.html)>.

Demographic Trends in the 20th Century, by Frank Hobbs and Nicole Stoops. U.S. Census Bureau, Census 2000 Special Reports, CENSR-4, 2002. Available also on the Census Bureau's Internet site at <[www.census.gov/population/www/censusdata/hiscendata.html](http://www.census.gov/population/www/censusdata/hiscendata.html)>.

Historical Census Statistics on Population Totals by Race, 1790 to 1990, and by Hispanic Origin, 1970 to 1990, for Large Cities and Other Urban Places in the United States, by Campbell Gibson and Kay Jung. U.S. Census Bureau, Population Division Working Paper No. 76, 2005. Available also on the Census Bureau's Internet site at <[www.census.gov/population/www/censusdata/hiscendata.html](http://www.census.gov/population/www/censusdata/hiscendata.html)>.

POPULATION DIVISION WORKING PAPER SERIES .....	97

# HISTORICAL CENSUS STATISTICS ON THE FOREIGN-BORN POPULATION OF THE UNITED STATES: 1850 TO 2000

## 1. Introduction

This working paper updates and supersedes Working Paper No. 29, “Historical Census Statistics on the Foreign-Born Population of the United States: 1850 to 1990.” The primary change to table content is the addition of data for 2000. The tables in the Internet version of the new working paper are in Excel and PDF whereas the tables in the previous working paper were in HTML only.

## 2. National Trends in the Foreign-Born Population

The 1850 decennial census was the first census in which data were collected on the nativity of the population. From 1850 to 1930, the foreign-born population of the United States increased from 2.2 million to 14.2 million, reflecting large-scale immigration from Europe during most of this period.<sup>1</sup> As a percentage of total population, the foreign-born population rose from 9.7 percent in 1850 and fluctuated in the 13 percent to 15 percent range from 1860 to 1920 before dropping to 11.6 percent in 1930. The highest percentages foreign born were 14.4 percent in 1870, 14.8 percent in 1890 and 14.7 percent in 1910.

From 1930 to 1950, the foreign-born population of the United States declined from 14.2 million to 10.3 million, or from 11.6 percent to 6.9 percent of the total population. These declines reflected the extremely low level of immigration during the 1930s and 1940s. The foreign-born population then dropped slowly to 9.6 million in 1970, when it represented a record low 4.7 percent of the total population. Immigration had risen during the 1950s and 1960s, but was still low by historical standards, and mortality was high during this period among the foreign-born population because of its old age structure (reflecting four decades of low immigration).

Since 1970, the foreign-born population of the United States has increased rapidly due to large-scale immigration, primarily from Latin America and Asia. The foreign-born population rose from 9.6 million in 1970 to 14.1 million in 1980, to 19.8 million in 1990, and to 31.1 million in 2000. As a percentage of total population, the foreign-born population increased from 4.7 percent in 1970 to 6.2 percent in 1980, to 7.9 percent in 1990, and to 11.1 percent in 2000, the highest percent foreign born recorded in the decennial census since 11.6 percent in 1930.

## 3. Data on the Foreign-Born Population in Statistical Compendia

The U.S. Bureau of the Census published historical data on the foreign-born population of the United States in three statistical compendia. The most recent, Historical Statistics of the United States, Colonial Times to 1970, was preceded by Historical Statistics of the United States, 1789-1945 and Historical Statistics of the United States, Colonial Times to 1957 (U.S. Bureau of the Census, 1975, 1949, and 1960, respectively; see references). This working paper, like Working Paper No. 29, is a

---

<sup>1</sup>U.S. Immigration and Naturalization Service, 1997, Table 1, p.25.

small reference work that updates and expands data on the foreign-born population presented in the most recent edition of Historical Statistics of the United States.<sup>2</sup>

#### 4. Accuracy of the Data

Since 1940, some data in the decennial census of population have been collected on a sample basis. Sample data are identified in the detailed tables.

The data contained in this paper are partially based on a sample of households or persons that responded to the census long form. As a result, the sample estimates may differ somewhat from the 100 percent figures that would have been obtained if all housing units, people within those housing units, and people living in group quarters had been enumerated using the same questionnaires, instructions, enumerators, and so forth. The sample estimates also differ from the values that would have been obtained from different samples of housing units, and hence of people living in those housing units, and people living in group quarters. The deviation of a sample estimate from the average of all possible samples is called the sampling error.

The sampling variability on data in the detailed tables for 1950 to 2000 is low because the data are for the United States as a whole, for states, and for large metropolitan areas and cities and thus are based on relatively large numbers of sample cases. For more information on sampling variability for each of these censuses, see the sources cited for each detailed table.

In addition to the variability that arises from sampling, both sample data and 100 percent data are subject to nonsampling error. Nonsampling error may be introduced during any of the various complex operations used to collect and process data. Such errors may include: not enumerating every household or every person in the population, failing to obtain all required information from the respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. In addition, errors can occur during the field review of the enumerators' work, during clerical handling of the census questionnaires, or during the processing of the questionnaires.

Nonsampling error may affect the data in two ways: first, errors that are introduced randomly will increase the variability of the data and, therefore, should be reflected in the standard errors; and second, errors that tend to be consistent in one direction will bias both sample and 100 percent data in that direction. Such biases are not reflected in the standard errors.

The estimates in the tables may vary from actual values due to sampling and nonsampling errors. As a result, the estimates used to summarize statistics for one population group may not be statistically different from estimates for another population group. Further information on the accuracy of the data from the 2000 census is located at <[www.census.gov/prod/cen2000/doc.sf3.pdf](http://www.census.gov/prod/cen2000/doc.sf3.pdf)>.

---

<sup>2</sup>An updated and expanded version of this reference, Historical Statistics of the United States: Millennial Edition, is forthcoming from Cambridge University Press in 2006.

## 5. Sources, Definitions, and Explanations for the Detailed Tables

The format of this section parallels the format in Historical Statistics of the United States. A general discussion of census data on the foreign-born population is followed by descriptions of each table, including sources.

The first decennial census of the U.S. population was taken in 1790, as required by the Constitution, in order to obtain the population counts needed for Congressional apportionment. A question on place of birth, which is the primary source of data on the foreign-born population, was not added until the 1850 census (Bohme et al., 1973).

Prior to 1850, the primary questions on the census were on age, sex, and race, although a few other topics had been included (e.g., the industrial classification of employed persons, with three categories in 1820 and seven categories in 1840). The data were collected not for individuals, but rather as tallies at the household level in predefined categories on the questionnaire (e.g., the number of household members who were White females under 5 years old or who were employed in commerce).

The 1850 census introduced major advances by collecting data for each individual and by permitting write-in responses which could be coded later into a large number of categories. These advances facilitated, most notably, the inclusion of questions on place of birth and on occupation, both of which have been included in every subsequent census. The question on place of birth in the 1850 census required the enumerator to record the state, territory, or foreign country. Individuals who were born in a state or territory of the United States (and the small number of individuals for whom place of birth was not reported) were defined as native, and individuals born in a foreign country were defined as foreign born. The dramatic increase in immigration to the United States during the 1840s may have been a motivation for adding the question on place of birth in the 1850 census.<sup>3</sup>

Data on the total foreign-born population of the United States are generally comparable from 1850 to 2000, although the definition of foreign born has been refined. Since 1890, individuals who were born in a foreign country, but who had at least one parent who was an American citizen, have been defined as native rather than as foreign born.<sup>4</sup>

In the 2000 census, the population was classified by nativity as follows. The native population included all U.S. residents who were born in the United States or an outlying area of the United States (e.g., Puerto Rico), or who were born in a foreign country, but who had at least one parent who was an American citizen. All other residents of the United States were classified as foreign born.

---

<sup>3</sup>Immigration to the United States increased from 599,000 in the 1831-1840 period to 1.7 million in the 1841-1850 period. Annual data show an increase from 52,000 in 1843 to 235,000 in 1847, and the figure remained above 200,000 through 1857 (U.S. Immigration and Naturalization Service, 1997, Table 1, p.25).

<sup>4</sup>Wright and Hunt, 1900, pp. 172 and 188.

Data in this report are for the United States as defined at each census in census reports. The total population shown in detailed tables for 1890 (62,622,250) is the population in general tabulations in 1890 census reports and excludes the population enumerated in the Indian Territory and on Indian reservations (325,464) for whom information on most topics, including nativity, was not collected. The 1890 census was the first to enumerate the entire American Indian population. Alaska and Hawaii are included in the U.S. population starting in 1960. Data showing the effect of these changes in geographic coverage on total population in 1890 and 1960 are included in Tables 8 and 9, which show data on the U.S. population by race and nativity.

Through 1940, census data on nativity of the population were based on data for the total enumerated population. For 1950 to 2000, data on nativity were based on a sample of the total population ranging from about 1 in 4 in 1960 to about 1 in 6 in 1990 and 2000. In 1970, there were two samples, one 15 percent and one 5 percent. The question on nativity was included on both samples. Data on length of residence in the United States, citizenship status, and on Hispanic origin were based on the 5-percent sample, and thus data on nativity cross-tabulated by these characteristics were based on the 5-percent sample. In the detailed tables, sample data are identified with an asterisk after the year (e.g., 1950\*).

General information on census data, including area classifications, definitions of topics, accuracy of the data, and collection and processing procedures, is provided in decennial census publications. The United States census has been taken on a *de jure* (usual place of residence) basis rather than on a *de facto* (location at the time of the census) basis. For a general discussion of census coverage and underenumeration, see U.S. Bureau of the Census, 1975, Part 1, Series A 1-371, p. 1. For evaluations of census coverage since 1940, see Fay et al., 1988; Robinson et al., 1993; U.S. Census Bureau, 2001a; and Robinson, 2001. For histories of the census of population, see Wright and Hunt, 1900; Eckler, 1972; and Anderson, 1988.

For a bibliography of all U.S. census publications through 1945, see Dubester, 1950. This catalog was reprinted in the Bureau of the Census Catalog of Publications: 1790-1972 (U.S. Bureau of the Census, 1974). For publications of the 1980 and 1990 censuses, see U.S. Bureau of the Census, 1984 and 1994. Additional information is available in the procedural histories of censuses cited in these catalogs. For publications of the 2000 census, see <<http://www.census.gov/prod/cen2000/index.html>>. For 2000 census data on the Internet, see <<http://www.census.gov/main/www/cen2000.html>>.

Sources for each detailed table are included below. All sources are decennial census publications unless otherwise noted. For publications from censuses of 1940 and earlier, sequence numbers are included from the Dubester catalog (Dubester, 1950), which provides Library of Congress call numbers, titles, and descriptions of the contents of each publication.

**Table 1. Nativity of the Population and Place of Birth of the Native Population: 1850 to 2000.**

Sources: For 1850-1870, 1870 census, Vol. I (Dubester #45), Table XXII, pp. 606-615. For 1880-1960, 1960 census, Vol. II, Subject Reports, Report No. 2A, State of Birth, PC(2)-2A, Table 1, p. 1. For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, PC(1)-D1, Table 191, p. 596. For 1980, 1980 census, Vol. 1, Characteristics of the Population, Ch. D, Part 1, Sect. A, PC80-

D1-A, Table 253, p. 7. For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 18, p. 18. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Quick Table QT-P22.

The native population includes all U.S. residents who were born in the United States or an outlying area of the United States (e.g., Puerto Rico), or who were born in a foreign country, but who had at least one parent who was an American citizen. All other residents of the United States are classified as foreign born. As described in the general text, the refinement to define as native those individuals who were born in a foreign country, but who had at least one parent who was an American citizen, was introduced in the 1890 census. It appears, however, that this instruction was not followed consistently by enumerators in 1890 (1890 census, Vol I, Part I, Dubester #177, p. clvii).

The outlying areas are as defined at each census. Thus, for example, individuals born in the Philippines (which was granted independence in 1946) were classified as native in 1940 and as foreign born in 1950. The primary outlying areas in censuses of the United States include Alaska (1880-1950), Hawaii (1900-1950), the Philippines (1900-1940), Puerto Rico (1900-2000), Guam (1900-2000), American Samoa (1900-2000), the Canal Zone (1900-1970), Virgin Islands of the United States (1920-2000), and Trust Territory of the Pacific Islands (1950-1980). See U.S. Bureau of the Census, 1975, Section 1, p. 9. Sources for data in Table 1, footnote 2 for Puerto Rico: For 1900, 1900 census, Supplementary Analysis (Dubester #273), p. 280. For 1910-1950, 1950 census, Vol. IV, Special Reports, Part 3, Ch. D, Puerto Ricans in Continental United States, P-E, No. 3D, Table A, p. 4. For 1960, 1960 census, Vol. II, Subject Reports, Report No. 1D, Puerto Ricans in the United States, PC (2)-2D, Table 1, p. 2. For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, PC (1)-D1, Table 191, p. 596. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, PC80-1-D1-A, Table 253, p. 7. For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 18, p. 18. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Quick Table QT-P22.

With regard to footnote 3 in Table 1, the 1970 census had two samples. In contrast to the 15-percent sample questionnaire, the 5-percent sample questionnaire did not include questions on birthplace of father and mother, but it did include questions on citizenship status and on year of entry for persons born in a foreign country. Sampling variability and differences in the questionnaires and in editing procedures account for the differences between data based on the 15-percent and 5-percent samples. These differences are most pronounced for the categories of "Born in the United States" and of "Born abroad of American parents."

D, Part 1, PC(1)-D1, Table 192, p. 598. For 1980, 1980 census, Statistical Profile of the Foreign-Born Population: 1980 Census of Population, CB84-179, Table 1, pp. 1-4; Vol. I, Characteristics of the Population, Ch. D, Part 1, Sect. A, PC80-D1-A, Table 254, p. 9; and special tabulations. For 1990, 1990 census, The Foreign-Born Population in the United States: 1990, CPH-L-98, Table 13, pp. 19-21; Social and Economic Characteristics, 1990 CP-2-1, Table 14, p. 14; and special tabulations. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Quick Table QT-P15, and special tabulations.

The countries or areas of birth included in Table 3 are those for which data are available for 2000. Prior to 1960, the earliest year included in this table, census data were published for only a small number of countries outside of Europe, reflecting the small number of non-European countries which were numerically important sources of immigration to the United States. Table 4 shows data for the 1850 to 1930 period and the 1960 to 2000 period for a less detailed list of countries.

The six regions of the world shown in Table 3 are based on the "macro regions" used by the United Nations in its Demographic Yearbook for 2002, <<http://unstats.un.org/unsd/demographic/products/dyb/dyb2.htm>>. These regions are Europe, Asia, Africa, Oceania, Latin America, and Northern America. In general, the subregions are the "component regions" used in the same publication. The differences are in Oceania and Europe. For Oceania, the component regions of Melanesia, Micronesia, and Polynesia are combined and shown as Pacific Islands as well as being shown separately when data are available. For Europe, the component regions of Northern, Western, Southern, and Eastern Europe are modified to reflect historical groupings and patterns of immigration to the United States: Albania and Yugoslavia (former) are included in Eastern Europe rather than in Southern Europe; and Estonia, Latvia, and Lithuania are included in Eastern Europe rather than in Northern Europe. Table 3 includes various subtotals of historical interest within regions (e.g., within Northern Europe, subtotals are shown for the British Isles and for Scandinavia).

Data on country of birth are based generally on the political boundaries of foreign countries existing at the date of the specified decennial census. Changes in political boundaries are less of a concern for the 1960 to 2000 period covered in Table 3 than for the entire 1850 to 2000 period for which data on country of birth are available and are shown in Table 4. Because of boundary changes, including those made following World War I and World War II, accurate comparisons over time are limited for some countries, such as Austria, Czechoslovakia (reported as Bohemia through 1900), Hungary, and Poland. For a discussion of the effects of these boundary changes, see U.S. Bureau of the Census, 1975, Part 1, text for Series C 228-295, pp. 103-104.

In Tables 3 and 4, the term "country or area of birth" is used (rather than just "country of birth") because the foreign geographic areas of birth for which data are available have not always reflected the United States' diplomatic relations at the date of each census.

**Table 4. World Region and Country or Area of Birth of the Foreign-Born Population, With Geographic Detail Shown in Decennial Census Publications of 1930 or Earlier: 1850 to 1930 and 1960 to 2000.**

For 1920, 1920 census, Vol. II, (Dubester #453), Ch. VI, Tables 3-4, pp. 694-695. For 1930, 1930 census, Vol. II (Dubester #653), Ch. 5, Table 4, p. 233. For 1960-2000, see sources for Table 3. In addition, see U.S. Bureau of the Census, 1975, Part 1, Series C 228-295, pp. 117-118.

See text for Table 3 concerning the definitions of regions and countries of birth. Data are not included in Table 4 for 1940 and 1950 because data on the foreign-born population by country of birth in census publications for these years are limited almost entirely to the White population. For data on the foreign-born White population by country of birth for 1910 to 1970, see U.S. Bureau of the Census, 1975, Part 1, Series C 228-295, pp. 117-118.

**Table 5. Language Spoken at Home for the Foreign-Born Population 5 Years and Over: 1980 to 2000.**

Sources: For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, Sect. A, PC80-1-D1-A, Table 256, p. 16, and special tabulations. For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 13, p. 13; Social and Economic Characteristics of Selected Language Groups for U.S. and States: 1990, CPH-L 159; and special tabulations. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Quick Table QT-P16, and special tabulations.

Data on language spoken at home are based on the question, "Does this person speak a language other than English at home?," and if the answer was yes, also on the question "What is this language?" (If the answer was yes, individuals were asked also "How well does this person speak English - Very well, Well, Not well, Not at all.") If individuals spoke both English and another language at home, they were classified by the non-English language in data shown in Table 5, regardless of how well they spoke English.

The categories used to group data on language spoken at home are both linguistic and geographic and are based generally on Classification and Index of the World's Languages (Voegelin, C.F. and F.M., 1977). The classification used in Table 5 includes three major language groups (Indo-European languages, Asian and Pacific Island languages, and Other languages) and selected language families within each of the three groups (e.g., Romance languages within the Indo-European language group). As a result, these categories do not always correspond to the regions and subregions of the world used to group countries of birth (Tables 3 and 4). For example, unlike most languages spoken in European

countries, Finnish and Hungarian are included with Other languages rather than with Indo-European languages.

All individual languages spoken at home with 10,000 or more foreign-born speakers in 1980 or 1990 or 2000 are listed separately in Table 5. Data for language families include languages not listed separately.

**Table 6. Mother Tongue of the Foreign-Born Population: 1910 to 1940, 1960, and 1970.**

Sources: For 1910-1920, 1920 census, Vol. II (Dubester #453), Ch. X, Table 1, p. 973. For 1930-1940, 1940 census, Nativity and Parentage of the White Population (Dubester #1001), Mother Tongue, Table 1, p. 7. For 1960, 1960 census, Vol. II, Subject Reports, Report 1E, Mother Tongue of the Foreign Born, PC(2)-1E, Tables 1-2, pp. 1-2. For 1970, 1970 census, Vol. II, Subject Reports, Report 1A, National Origin and Language, PC(2)-1A, Table 19, p. 492.

Data on mother tongue are based on a question on language spoken in this person's home when he was a child or, when the question was limited to the foreign-born population, on a question on what language was spoken in this person's home before he came to the United States. Data on mother tongue for 1910 to 1940 were tabulated only for the White population, which represented over 98 percent of the foreign-born population during this period (Table 9). For 1960 and 1970, data are shown for both the White foreign-born population (to compare with data for 1910 to 1940) and for the total foreign-born population. Starting with the 1980 census, a question on language spoken at home replaced the question on mother tongue. Data on language spoken at home for the foreign-born population are shown in Table 5.

To the extent possible, the language groups and families used to group data on mother tongue are the same as used in Table 5 to group data on language spoken at home. However, the concepts of mother tongue and language spoken at home differ considerably, and thus data in Tables 5 and 6 are not comparable.

**Table 7. Age and Sex of the Foreign-Born Population: 1870 to 2000.**

Sources: For 1870, 1870 census, Vol. II (Dubester #49), Table XXII, pp. 552-553. For 1880, 1880 census, Vol. I (Dubester #61), Table XVII, p. 542, and Table XX, pp. 548-551. For 1960, 1960 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, PC(1)-D1, Table 156, p. 354, and Table 161, p. 364. For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, PC(1)-D1, Table 191, p. 596. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. D, Part 1,

Sect. 1, PC80-1-D1-A, Table 253, p. 7, and special tabulations. For 1990, 1990 census, Foreign-Born Population in the United States, 1990 CP-3-1, Table 1, pp. 1-2, and special tabulations. For 2000, Census 2000, special tabulations.

In censuses of 1880, 1890, and 1910 to 1940, published census data on the age and sex distribution of the foreign-born population were limited primarily to the foreign-born White population. During this period, the foreign-born population of races other than White, which peaked at 220,744 in 1930, represented between 1 percent and 2 percent of the total foreign-born population (Table 9). Because age data for the total foreign-born population are available for 1870, 1900, and 1950 to 2000, and because the foreign-born population of races other than White represented such a small proportion of the total foreign-born population from 1880 to 1940, the population universe for Table 7 is the total foreign-born population. The foreign-born population of races other than White is included in the category "age data not available" for 1880, 1890, and 1910 to 1940.

For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 43, p. 43.

The racial and Hispanic origin categories shown in the boxhead of Table 8 reflect the guidelines set forth in Statistical Policy Directive No. 15, "Race and Ethnic Standards for Federal Statistics and Administrative Reporting" (U.S. Office of Management and Budget, 1977).<sup>5</sup> Data by race or color for all censuses since 1850 have been made consistent with Directive No. 15 to the extent possible. Data for the Hispanic origin category are available since 1970, and data for the category of White, not of

---

<sup>5</sup>"Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity" (U.S. Office of Management and Budget, 1997) made some changes to the standards in Directive No. 15, including permitting individuals to report more than one race and dividing the Asian and Pacific Islander category into two categories. See Table 10 for data for 2000.

Hispanic origin are included also since 1970. Individuals of Hispanic origin, the vast majority of whom report themselves by race as White or as "Other race," may be of any race.

There was a dramatic population increase in Other race from 1970 to 1980. This reflected the addition of a question on Hispanic origin to the 100-percent questionnaire, an increased propensity for Hispanics not to identify themselves as White, and a change in editing procedures to accept reports of "Other race" for respondents who wrote in Hispanic entries such as Mexican, Cuban, or Puerto Rican. In 1970, such responses in the Other race category were reclassified and tabulated as White.

The classification of the population by race reflects common or social usage. It does not denote any clear-cut scientific definition of biological stock. Through 1950, the classification of the population by race was usually obtained by the census enumerator's observation. Individuals of mixed White and other parentage were usually classified with the other race. In 1960, census data on race were collected by a combination of self-classification, direct interview, and observation. In the 1970 census, data on race and Hispanic origin were obtained primarily through self-classification. In the 1980 and 1990 censuses, the data were obtained entirely through self-classification.

In the 1850 census, the only racial classifications in census reports were for White and Black. It is not clear how the unknown, but clearly very small, number of enumerated individuals who were not White or Black were classified by race. Chinese and American Indian classifications were added in the 1860 census; however, prior to 1890, the enumeration of American Indians excluded Indian reservations and American Indians living elsewhere in tribal society (not taxed). Japanese was added in 1870, and other Asian "races" were added starting in 1910. In the 1930 census only, Mexican was defined as a race. Tabulations for 1930 were revised to include Mexicans with White and were included in 1940 census reports and are included in this report.

In the 1950 census, an "Other races" category was added in an attempt to identify individuals of mixed White, Black, and Indian ancestry. This attempt was only partially successful; however, the "Other races" category was retained, and with self-identification of race and Hispanic origin, there has been a dramatic increase since 1970 in the "Other races" population. This is due primarily to individuals who are of Hispanic origin and who choose not to report in a specific racial category, such as White or Black.

Data by race for 1950 and for 1960 in Table 8 are based on more than one tabulation of the data and in some cases on more than one sampling rate. As a result, the totals for races other than White differ slightly from the sum of the component races. Data for 1950 on the population by nativity for these component races are highly inconsistent and are not included in Table 8. See sources for Table 8.

For more detailed discussions of data on race and Hispanic origin, see U.S. Bureau of the Census, 1975, Section 1, text for Series A 91-104, pp. 3-4, and the sources listed above for Table 8.

**Table 9. Race and Hispanic Origin of the Foreign-Born Population: 1850 to 1990.**

Source: Table 8.

Table 9 summarizes data on the foreign-born population by race and Hispanic origin and shows the corresponding percent distribution of the foreign-born population. See text for Table 8 regarding data on race and Hispanic origin.

**Table 10. Race and Hispanic Origin of the Population by Nativity and of the Foreign-Born Population: 1990 and 2000.**

Sources: For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 43, p. 43, and Table 107, pp. 109-110. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 4, Detailed Table PCT 43.

Table 10 shows data on the foreign-born population by race and Hispanic origin for 2000, reflecting "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity" (U.S. Office of Management and Budget, 1997), and data for 1990. The revisions implemented in the 2000 census permitted individuals to report more than one race and divided the Asian and Pacific Islander category into two categories. The division of the Asian and Pacific Islander category into the categories of Asian and of Native Hawaiian and Other Pacific Islander does not present any major issues of comparability since the 1990 data can be divided; however, the option in 2000 to report more than one race means that the data for 1990 and 2000 are not directly comparable. Data for 2000 are shown for race alone and for race alone or in combination with one or more other races, which represent the minimum and maximum definitions, respectively, of the population in a race category (e.g., for Asian). These data provide a minimum-maximum range for change since 1990 when respondents could report only one race. For more information on 2000 data by race, see U.S. Census Bureau, 2001b.

**Table 11. Length of Residence in the United States of the Foreign-Born Population: 1900 to 1930 and 1970 to 2000.**

D, Part 1, PC(1)-D1, Table 195, p. 600, and Vol. II, Subject Reports, Report 1A, National Origin and Language, PC(2)-1A, Table 17, p. 440. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC80-1-C1, Table 99, p. 68. For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 13, p. 13, and Social and Economic Characteristics of Selected Language Groups for U.S. and States, CPH-L-159. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Quick Table QT-P14, and special tabulations.

Data on length of residence in the United States of the foreign-born population are available from the censuses of 1900 to 1930 and 1970 to 2000 and are based on a question on the year of immigration

(for 1900-1930) or on a question on the year when this person came to the United States to stay (for 1970-1990) or to live (for 2000). For presentation in Table 11, the data have been converted to length of residence in years. This conversion is approximate, reflecting the reference dates of pertinent censuses: June 1 in 1900, April 15 in 1910, Jan. 1 in 1920, and April 1 for 1930 and 1970 to 2000.

Length of residence in (completed) years is based on published data on year of immigration or on year came to stay or to live as follows. For 1900: under 4 (1896-1900), 4-8 (1891-95), 9-13 (1886-90), 14-18 (1881-85), 19+ (before 1881). For 1910: under 4 (1906-10), 4-8 (1901-05), 9-13 (1896-1900), 14-18 (1891-95), 19+ (before 1891). For 1920: under 4 (1916-1920), 4-8 (1911-15), 9-13 (1906-10), 14-18 (1901-05), 19+ (before 1901). For 1930: under 5 (1925-30), 5-9 (1920-24), 10-14 (1915-19), 15-18 (1911-14), 19-28 (1901-10), 29+ (before 1901). For 1970: under 5 (1965-70), 5-9 (1960-64), 10-14 (1955-59), 15-19 (1950-54), 20-24 (1945-49), 25-34 (1935-44), 35-44 (1925-34), 45-54 (1915-24), 55+ (before 1915). For 1980: under 5 (1975-80), 5-9 (1970-74), 10-14 (1965-69), 15-19 (1960-64), 20-29 (1950-59), 30+ (before 1950). For 1990: under 5 (1985-90), 5-9 (1980-84), 10-14 (1975-79), 15-19 (1970-74), 20-24 (1965-69), 25-29 (1960-64), 30-39 (1950-59), 40+ (before 1950). For 2000: under 5 (1995-2000), 5-9 (1990-94), 10-14 (1985-89), 15-19 (1980-84), 20-24 (1975-79), 25-29 (1970-74), 30-34 (1965-69), 35-39 (1960-1964), 40-44 (1955-1959), 45-49 (1950-1954), 50-54 (1945-1949), 55+ (before 1945).

**Table 12. Citizenship Status of the Foreign-Born Population: 1890 to 1950 and 1970 to 2000.**

Sources: For 1890-1930, 1930 census, Vol. II (Dubester #653), Ch. 8, Table 4, p. 405. For 1940, 1940 census, Vol. II, Part 1 (Dubester #957), Tables 27-29, pp. 79-81. For 1950, 1950 census, Vol. II, Characteristics of the Population, Ch. C, Part 1, Bulletin P-C1, Table 101, p. 178. For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. D, Part 1, PC(1)-D1), Table 194, p. 599. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch D, Part 1, Sect. A, PC80-1-D1-A, Table 253, p. 7, and special tabulations. For 1990, 1990 census, Foreign-Born Population of the United States, 1990 CP-3-1, Table 1, p. 1. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 4, Detailed Table, PCT44, and special tabulations.

In 1960, a question on citizenship status was not included on the general census questionnaire (although it was included on the questionnaire used in New York state). Prior to the 1920 census, published census data on citizenship status were restricted to males 21 years and over. Starting with the 1930 census, data on citizenship status have been published by sex for all ages as well as for the voting age population. For years prior to 1940, when age not reported was not allocated, the data on citizenship status by age assume that all individuals for whom age was not reported were 21 years and over.

**Table 13. Nativity and Parentage of the Population: 1890 to 1930, 1960, and 1970.**

Sources: For 1890, 1890 census, Vol. I, Part I (Dubester # 177), Table 20, pp. 486-487, and Tables 35-36, pp. 681-683. For 1900-1930, 1930 census, Vol. II (Dubester #653), Ch. 2, Table 6, p. 33. For 1960, 1960 census, Vol. II, Subject Reports, Report 1A, Nativity and Parentage, PC(2)-1A, Table 1,

p. 2. For 1970, 1970 census, Vol. II, Subject Reports, Report 1A, National Origin and Language, PC(2)-1A, Table 1, p. 1.

The terms native population and foreign-born population were defined earlier (see text for Table 1). Information on birthplace of parents may be used to classify the native population by parentage: native of native parentage (both parents native), native of foreign parentage (both parents foreign-born) and native of mixed parentage (one parent native and one parent foreign born). The term foreign stock includes the foreign-born population and the native population of foreign or mixed parentage. Just as the native population and foreign-born population comprise the total population, the native population of native parentage and the foreign-stock population also comprise the total population.

A question on birthplace of parents was included in the census from 1870 to 1970; however, data on parentage for the total population are available only since 1890. For data on the parentage of the White population from 1870 to 1970, see U.S. Bureau of the Census, Part 1, 1975, Series A 135-142, p. 19. Starting in the 1980 census, a question on ancestry (based on self-identification) replaced the question on birthplace of parents.

The approach to classifying only the native population by parentage was adopted in census reports for 1910. In census reports for 1890 and 1900, the total population was classified by nativity and parentage, even though a very small proportion of foreign-born individuals were of native parentage. Data published in 1890 for races other than White do not permit adjustment of the data to be consistent with the current approach; however, the adjustment was made in the data presented here based on the assumption that the relatively small foreign-born population of races other than White in 1890 (127,680) was entirely of foreign or mixed parentage. This is a reasonable assumption because a large majority of the foreign-born population of races other than White was Asian (Chinese or Japanese), as shown in Table 9.

For 1960, 1960 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC(1)-C1, Table 108, p. 251. For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC(1)-C1, Table 143, p. 472. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC80-1-C1, Table 99, p. 68, Table 183, pp. 181-182, and Table 236, pp. 291-296. For 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 143, pp. 173-179. For 2000, Census 2000, Summary Social, Economic, and Housing Characteristics, PHC-2-1, Part 1, Table 1, p. 1, <<http://www.census.gov/prod/cen2000/phc-2-1-pt.1.pdf>>.

Data on the population by nativity for regions, divisions, and states are consistent with data in Table 1 for the United States. For information on the boundaries of states and of territories preceding

statehood, see Forstall, 1996. The groupings of states into regions and divisions of the United States are those currently used by the Census Bureau. For the history of census regions and divisions and their predecessor areas, see Dahmann, 1992.

**Table 15. Foreign-Born Population by Historical Section and Subsection of the United States: 1850 to 2000.**

Source: Table 14, and Dahmann, 1992.

The four regions -- Northeast, North Central (subsequently renamed Midwest), South, and West -- were introduced in the 1940s and replaced the three sections introduced in the 1910 census: North, South, and West. For the presentation of historical data, including data on the foreign-born population, the three sections are in some ways preferable because they permit direct comparisons of North and South. The North is divided into two subsections (Northeast and North Central), and the South is divided into two subsections (Southeast and South Central). These subsections recognize the westward expansion of settlement from the Atlantic seaboard and facilitate comparisons of the eastern and central portions of the United States.

**Table 16. Nativity of the Population by Type of Residence: 1960 to 2000.**

Sources: For 1960, 1960 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC(1)-C1, Table 101, p. 238. For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC(1)-C1, Table 108, p. 414. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC80-1-C1, Table 110, p. 81. For 1990 as defined effective June 30, 1990, 1990 census, Social and Economic Characteristics, 1990 CP-2-1, Table 27, p. 27. For 1990 as defined effective June 30, 1993, 1990 census, Supplementary Reports, Metropolitan Areas as Defined by the Office of Management and Budget, June 30, 1993, Section 1, 1990 CPH-S-1-1, Table 5, pp. 262-408. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Detailed Tables, Table P21, and special tabulations.

Under OMB standards prior to December 2000, and in data in general data products through the 2000 census, the United States was divided into two type-of-residence categories: metropolitan and nonmetropolitan, with the latter referring to all territory that did not qualify as metropolitan. The general concept of a metropolitan area (MA) is that of a core area containing a large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that core. Some MAs are defined around two or more cores. The component units of MAs are counties, except in the New England states where the component units are cities and towns. In each MA, the largest place (usually an incorporated city) and, in some cases, additional places are designated as "central cities." With some exceptions, each MA includes at least one central city with 50,000 or more population. For more information about these definitions, see the sources listed for Table 16.

OMB standards issued in December 2000 define metropolitan (metro) statistical areas and micropolitan (micro) statistical areas (collectively labeled as core-based statistical areas), with all other territory being defined as outside core-based statistical areas. Both metro and micro counties are

composed of one or more whole counties (or county equivalents, such as independent cities). Metro areas include at least one Census Bureau-defined urbanized area of 50,000 or more population, and micro areas include at least one urban cluster of 10,000 to 49,999 population. For more information, see <<http://www.census.gov/population/www/estimates/html>> and the links provided there. For the December 2000 standards, see <<http://www.census.gov/population/www/estimates/00-32997.pdf>>. Urbanized areas and urbanized clusters are discussed at <[http://www.census.gov/geo/www/ua/ua\\_2k.html](http://www.census.gov/geo/www/ua/ua_2k.html)>.

**Table 17. Nativity of the Population for Metropolitan Statistical Areas With 1,000,000 or More Population and Their Component Metropolitan Divisions: 2000.**

Source: Census 2000, special tabulations.

A metropolitan division is a county or group of counties within a core-based statistical area that contains a core with a population of at least 2.5 million. A metropolitan division consists of one or more main/secondary counties that represent an employment center or centers, plus adjacent counties associated with the main county or counties through commuting ties. See <<http://www.census.gov/population/www/estimates/00-32997.pdf>> for more information.

**Table 18. Nativity of the Population for Combined Statistical Areas With 1,000,000 or More Population and Their Component Metropolitan and Micropolitan Statistical Areas: 2000.**

Source: Census 2000, special tabulations.

A combined statistical area is a geographic entity consisting of two or more adjacent core-based statistical areas with substantial employment interchange. See <<http://www.census.gov/population/www/estimates/00-32997.pdf>> for more information.

**Table 19. Nativity of the Population for Metropolitan Statistical Areas (MSAs) and Consolidated Metropolitan Statistical Areas (CMSAs) With 1,000,000 or More Population: 2000.**

Source: Census 2000, Summary Social, Economic, and Housing Characteristics, PHC-2-1, Part 1, Table 17, pp. 17-36. <<http://www.census.gov/prod/cen2000/phc-2-1-pt.1.pdf>>.

Table 19 shows 2000 census data using OMB standards in effect at the time of the census (April 2000). See Census 2000, Summary Social, Economic, and Housing Characteristics, PHC-2-A, pp. A-16 and A-17, <<http://www.census.gov/prod/cen2000/phc-2-a.pdf>>.

For a general description of metropolitan areas (MAs), see text for Table 16. To meet the needs of various data users, the standards for defining MAs permit an MA to be classified either as a metropolitan statistical area (MSA), or as a Consolidated Metropolitan Statistical Area (CMSA) that is divided into primary metropolitan statistical areas (PMSAs). For purposes of ranking MAs by total

population in 2000 in Table 19, MSAs and CMSAs are used, and component PMSAs are shown for each CMSA.

**Table 20. Nativity of the Population for Metropolitan Areas With 500,000 or More Population: 1960.**

Source: For 1960, 1960 census, Vol. I, Characteristics of the Population, Ch. C, Parts 2-52 (for each state), PC(1)-C1 to C52, Table 72.

For a general description of metropolitan areas (MAs), see text for Table 16. MAs for which data were shown in 1960 census reports were standard metropolitan statistical areas (SMSAs). In addition, two standard consolidated areas (SCAs) were included, for New York and Chicago. These correspond generally to standard metropolitan areas (SMAs) for New York and Chicago shown in 1950 census reports. For purposes of ranking MAs by total population in 1960 in Table 20, the two SCAs and the SMSAs outside of the New York and Chicago SCAs are used. On this basis, there are 49 MAs with 500,000 or more population shown in Table 20.

**Table 21. Nativity of the Population for Metropolitan Districts With 250,000 or More Population: 1940.**

Source: 1940 census, Vol. II (Dubester #956), Parts 1-7, Table 4 (for each state).

Metropolitan districts were defined by the Census Bureau for use in presenting decennial census data from 1910 to 1940; however, data by nativity of the total population for metropolitan districts were published only for 1940. Metropolitan districts, which were replaced starting in 1950 with county-based metropolitan areas, were defined in 1940 in general as cities with 50,000 or more population and all contiguous minor civil divisions or incorporated places with an average population density of 150 or more persons per square mile. For more information, see the source cited for Table 21.

**Table 22. Nativity of the Population by Urban-Rural Residence and Size of Place: 1870 to 1940 and 1960 to 2000.**

For 1970, 1970 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC(1)-C1, Table 97, p. 403. For 1980, 1980 census, Vol. I, Characteristics of the Population, Ch. C, Part 1, PC80-1-C1, Table 99, p. 68. For 1990, 1990 census, Social and Economic

Characteristics, 1990 CP-2-1, Table 13, p. 13. For 2000, Census 2000, <<http://www.census.gov/main/www/cen2000.html>>, Summary File 3, Detailed Tables, Table P21.

In 2000, the urban population was defined as the population of urbanized areas (50,000 or more population) and urban clusters (2,500 to 49,999 population) where both urbanized areas and urban clusters encompassed densely settled territory without regard to corporate boundaries. The remainder of the population was defined as rural. The definition of urban in 2000 differs from that of 1990 and earlier, which relied heavily on corporate boundaries. For more information on the 2000 definition of urban, see <<http://www.census.gov/prod/cen2000/phc-1-1-pt2.pdf>>.

In 1990, the urban population was defined as the population in (1) incorporated places (e.g., cities) of 2,500 or more population, (2) census designated places (CDPs) (i.e., unincorporated places) of 2,500 or more population, and (3) other territory, incorporated or unincorporated, in urbanized areas. The remainder of the population was defined as rural.

In 1990, urbanized areas were defined as one or more "central places" and the adjacent densely settled (with at least 1,000 population per square mile) surrounding territory ("urban fringe") that together had at least 50,000 population.

Changes in the definitions of urban, rural, and urbanized areas were relatively minor from 1950, when urbanized areas were first delineated, to 1990. Prior to 1950, the urban population was defined generally as the population in incorporated places of 2,500 or more population. The population threshold of 2,500 for defining places as urban was adopted in the 1910 census; however, data on the nativity of the population using this population threshold are available for 1890 and 1900 and are included in Table 22.

The rural population is classified as rural nonfarm or rural farm. The farm population consists of individuals in households living in farm residences. In the 2000 census, a one-family house or mobile home was classified as a farm residence if (1) it was located on a property of 1 acre or more and (2) at least \$1,000 of agricultural products were sold from the property in 1999. Data on the nativity of the rural farm and rural nonfarm population are available since 1930; however, the definition of farm changed considerably between 1930 and 2000. From 1930 to 1950, the farm population included all individuals living on farms. The definition of a farm depended primarily upon local usage and the respondent's view of what constituted a farm. In 1960, acreage and sales were introduced in the decennial census as criteria for defining farms.

For more detailed discussions of definitions of urban, urban place, urbanized area, rural, rural nonfarm, and rural farm see the sources for Table 22. For more detailed discussions of the changes in definitions of urban and urban place, see also Truesdell, 1949, and Gibson, 1998.

For 1930 for places of 100,000+ population, 1930 census, Vol. II (Dubester #653), Ch. 2, Table 23, pp. 67-73; and for places of 50,000-99,999 population, Ch. 4, Table 35, pp. 199-201. For 1940 for places of 100,000+ population, 1940 census, Vol. II, Parts 1-7 (Dubester # 956), Table 36 (for each state); and for places of 10,000-99,999 population, Table 31 (for each state). For 1950 for places of 100,000+ population, 1950 census, Vol. II, Characteristics of the Population, Ch. C, Parts 2-50 (for states), Bulletin P-C2 to C50, Table 55. For 1960 for places of 10,000+ population, 1960 census, Vol. I, Characteristics of the Population, Ch. C, Parts 2-52 (for states), PC(1)-C2 to C52, Table 72. For 1970 for places of 50,000+ population, 1970 census, Vol. I, Characteristics of the Population, Ch. C, Parts 2-52 (for states), PC(1)-C1 to C52, Table 81; and for places of 10,000-49,999 population, Table 102. For 1980 for places of 50,000+ population, 1980 census, Vol. I, Characteristics of the Population, Ch. C, Parts 2-52 (for states), PC (1)-C2 to C52, Tables 118 and 118a; for places of 10,000-49,999 population, Tables 156 and 156a; and for places of 2,500-9,999 population, Tables 166 and 166a. For 1990 for places of 10,000+ population, 1990 census, Social and Economic Characteristics, 1990 CP-2-2 to 52, Table 167; and for places of 2,500-9,999 population, Table 195. For 2000, Census 2000, Summary Social, Economic, and Housing Characteristics, PHC-2-1, Part 2, Table 49, pp. 836-839.  
<<http://www.census.gov/prod/cen2000/phc-2-1-pt.2.pdf>>.

Table 23 includes data starting with the 1870 census, the first census for which reports showed data on a comprehensive basis on the nativity of the population for places. The lists of the 50 largest urban places at each census through 1990 are from Gibson, 1998. With a few exceptions, the urban places shown in Table 23 are incorporated cities. Honolulu, which is included from 1960 to 2000, is a census designated place (CDP). (See text for Table 22 regarding CDPs.) Three cities included in Table 23 from 1970 to 2000 reflect consolidations of city and county governments: Indianapolis, Jacksonville, and Nashville. The first two are listed as cities in census publications while the last is listed as Nashville-Davidson. See sources for Table 23 for more information on consolidated cities.

**Table 24. Nativity of the Population for the 25 Largest Urban Places and for Selected Counties: 1860.**

Source: 1860 census, Population of the United States in 1860 (Dubester #37), recapitulation section, pp. 608-615, and state sections, Tables 3-4.

Table 24 presents available data on the population of the 25 largest urban places in 1860, along with data for their parent counties when data are not available for the individual urban places in 1850 or 1860. In the 1870 census, in which data are available for both counties and places, the percent foreign born in the population in these cities was usually higher than in their respective parent counties.

**Table 25. Nativity of the Population for the 25 Largest Urban Places and for Selected Counties: 1850.**

Source: 1850 census, The Seventh Census of the United States: 1850 (Dubester # 30), Table of Counties, Districts, and Parishes in the United States, 1850, pp. xcv-cii, and Census of 1852 for California, Tables I-II, p. 982; and Statistical View of the United States (Dubester # 33) Appendix, Table III, p. 399.

Table 25 presents available data on the population of the 25 largest urban places in 1850, along with data for their parent counties when data are not available for the individual urban places in 1850 or 1860. In the 1870 census, in which data are available for both counties and places, the percent foreign born in the population in these cities was usually higher than in their respective parent counties.

**Table 26. Nativity of the Population for Urban Places Ever Among the 50 Largest Urban Places Since 1870: 1850 to 2000.**

Sources: See sources for Table 23.

Each urban place included for any year in Table 23 is included in Table 26. Available data on nativity of the population are included for each year, regardless of whether or not the urban place was among the 50 largest urban places in that year. Ranks in total population for 1950 to 1990 among all urban places in the United States, which are based on sample data, differ in a few cases from those shown in Gibson, 1998, which are based on complete-count data for all censuses in the 1850 to 1990 period.

\* Indicates sample data.

- Represents zero or rounds to zero.

<sup>1</sup> Starting in 1960, includes population of Alaska and Hawaii. For 1890, excludes population enumerated in the Indian Territory and on Indian reservations for whom information on most topics, including nativity, was not collected. See Table 6.

<sup>2</sup> Puerto Rico is the only outlying area for which the number has ever exceeded 100,000. The numbers for Puerto Rico: 1,439,674 in 2000; 1,190,533 in 1990; 1,002,863 in 1980; 810,087 in 1970; 617,056 in 1960; 226,010 in 1950; 69,967 in 1940; 52,774 in 1930; 11,811 in 1920; 1,513 in 1910; and 678 in 1900. See text for Table 1.

<sup>3</sup> The data shown in Table 1 are based on the 15-percent sample. For 1970, data based on the 5-percent sample show total population as 203,193,774, native population as 193,590,856, born in the United States as 191,836,655, born abroad as 1,617,396, in outlying areas as 873,241, of American parents as 744,155, and foreign-born population as 9,739,723. See text for Table 1.

<sup>4</sup> In 1850 and 1860, information on nativity was not collected for slaves. The data in the table assume, as was done in 1870 census reports, that all slaves in 1850 and 1860 were native. Of the total Black population of 4,880,009 in 1870, 9,645, or 0.2 percent, were foreign-born (1870 census, Vol. I, Dubester #45, Table XXII, pp. 606-615).

Internet Release Date: February 2, 2006

Region or country not reported <sup>1</sup> .....	316	808,158	887,343	315,721	59,890

\* Indicates sample data. (NA) Not available. n.e.c. Not elsewhere classified.

<sup>1</sup> In 2000, for the first time, includes imputed data on country of birth if country of birth was not reported. Born at sea included with not reported.

<sup>2</sup> In 2000, data for Portugal (total) include Madeira Islands.

<sup>3</sup> Data for the former Soviet Union include the part in Asia, as shown in this table under Asia.

<sup>4</sup> In 1960 and 1970, data for China include Taiwan. In source for 2000 census data, a total is shown also for China including Hong Kong and Taiwan (1,518,652).

<sup>5</sup> In 2000, data for Palestine (shown separately in 1990) included in Asia n.e.c.

<sup>6</sup> In 1960 and 1970, data shown for Cape Verde are for Other Atlantic Islands.

<sup>7</sup> Includes Federated States of Micronesia.

Internet Release Date: February 2, 2006

Table 4. World Region and Country or Area of Birth of the Foreign-Born Population, With Geographic Detail Shown in Decennial Census Publications of 1930 or Earlier: 1850 to 1930 and 1960 to 2000

(See text for sources, definitions, and explanations)

\* Indicates sample data.

(NA) Not available.

<sup>1</sup> For 1970, assumes that all individuals with Celtic mother tongue are White

<sup>2</sup> For 1910-1940, Hebrew included with Yiddish

<sup>3</sup> For White in 1960, the published estimate (794,714) includes Basque. The estimate here assumes that all individuals with Basque mother tongue (1,580) are White

<sup>4</sup> For 1920, probably includes a "considerable proportion" of individuals of Yiddish mother tongue erroneously reported as of Russian mother tongue. See sources in text

<sup>5</sup> For White in 1960, the published estimate (87,997) includes Dalmatian. The estimate here assumes that all individuals with Dalmatian mother tongue (1,137) are White

<sup>6</sup> For 1970, includes 10,031 cases of Breton (which appears to be too high), and 10,208 cases of Other Balto-Slavonic languages. In 1960, the 535 cases of Breton were included with French. For 1960, includes 49,610 cases of Other Balto-Slavonic languages.

\* Indicates sample data. - Represents zero. (X) Not applicable. (NA) Not available.

<sup>1</sup> See text for Table 7. For 1870 and 1900, age data not available include age not reported for all races. For 1880 and 1940 (when age not reported was allocated), age data not available include only the foreign-born population of races other than White. For 1890 and 1910-1930 age data not available include age not reported for the White foreign-born population and also the total foreign-born population of races other than White as follows: 1890 - 127,680 total, 115,272 males, and 12,408 females; 1910 - 170,341 total, 143,960 males, and 26,381 females; 1920 - 207,938 total, 147,113 males, and 60,825 females; 1930 - 220,745 total, 144,599 males, and 76,146 females. For 1950-2000 age not reported was allocated. <sup>2</sup> For additional data on the foreign-born population 18 years and over and 21 years and over, see Table 11. <sup>3</sup> For 1930, 75 years and over. <sup>4</sup> For 1870, 80 years and over.

Internet Release Date: February 2, 2006

(X) Not applicable.

(NA) Not available.

<sup>1</sup> For 1950 to 1970, Eskimo and Aleut included with "Other race."

<sup>2</sup> For 1950 and 1960, Hawaiian included with "Other race."

<sup>3</sup> The 1950 census was the first census in which the race question included a separate category for "Other race." See text for Table 8.

<sup>4</sup> Estimates for 1940 of the Hispanic origin population and of the White, not of Hispanic origin population are based on 5-percent sample data on the White population with mother tongue of Spanish. See text for Table 8.

<sup>5</sup> The 1960 population of Alaska and Hawaii (858,940) is included in the first block of data for 1960 and is excluded in the second block of data for 1960. See text for Table 8 regarding minor inconsistencies in sample data by race for 1960.

<sup>6</sup> See text for Table 8 regarding minor inconsistencies in sample data by race for 1950.

<sup>7</sup> The 1890 population of the Indian Territory and on Indian Reservations (325,464), for which data on nativity are not available, is included in the first block of data for 1890 and excluded in the second block of data for 1890. See text for Table 8.

<sup>8</sup> Data by nativity for the total population in 1850 and 1860 assume, as was done in 1870 census reports, that the entire slave population in 1850 and 1860 was native, that the entire American Indian population in 1860 was native, and that the entire Asian population in 1860 was foreign born.

Internet release date: February 2, 2006

\* Indicates sample data.

(X) Not applicable. Alaska and Hawaii prior to 1960 are in this category.

(NA) Not available. Geographic area not enumerated.

<sup>1</sup> Data shown for 1900 for Oklahoma include Oklahoma Territory and the Indian Territory, which were merged and admitted as the state of Oklahoma in 1907. Population of Oklahoma Territory in 1900: total, 398,331; native, 382,651; foreign-born, 15,680; percent foreign-born, 3.9. Population of Indian Territory in 1900: total 392,060; native 387,202; foreign-born, 4,858; percent foreign-born, 1.2 (1900 census, Vol. 1, Part 1, Dubester # 252, Table 9, p. 482).

<sup>2</sup> Data shown for 1860 to 1880 for South Dakota are for the Dakota Territory and include North Dakota. South Dakota and North Dakota were formed from Dakota Territory and admitted as states in 1889.

<sup>3</sup> Data shown for 1850 and 1860 for Virginia include the present area of West Virginia, which was admitted as a separate state in 1863.

Internet Release Date: February 2, 2006
