

# Doing data differently

**Helping the global financial community make informed decisions through the provision of comprehensive, accurate, timely and affordable securities and economic data services**

With more than 30 years' experience, we offer comprehensive and accurate securities reference, corporate actions and pricing data for derivatives, equities, fixed income, and investment funds around the globe. We also cover economic data extensively.

We understand how crucial financial and economic data is and take a different approach as to how we proceed:

- We do not rent data, we sell it
- We do not have onerous redistribution rules
- We customize our services to meet your needs
- We cover all countries – no matter how large or small
- Finally, we offer competitive prices

As a result of our on-going commitment to providing cost-effective and innovative data solutions, while ensuring the highest standards, EDI has achieved the internationally recognized quality and security certifications ISO 9001 and ISO 27001.

Headquartered in the United Kingdom, we have operations in Australia, Canada, Germany, India, Morocco, South Africa, and in the United States.

Our Support Team is available on +44 (0) 207 324 0020, 24 hours a day, Monday to Friday and are closed on Christmas and New Year's Day.

## Service Overview

### NOW AVAILABLE VIA API

The Worldwide Equity Analytics is a new feed of derived equity data which provides clients with high-quality information to efficiently manage and value their portfolio.

The file comprises of a customizable set of more than 60 equity derived data fields along with fields from our Securities Reference File and our closing pricing one.

The link to the price files ensures that the analytics for each exchange are published soon after the release of the relevant price file which is often as soon as market close.

### All the necessary analytics compiled into one file

The WEA service covers equities traded in 144 global exchanges. Additional analytics can be added upon request depending on availability of raw data, processing time and formulas.

Customized versions of analytics can be generated upon request.

## Derived Data Calculation Specifications

- History commencing from 1<sup>st</sup> Jan 2007 for all exchanges.
- Adjustments - events used to back-adjust history:
  - Subdivisions
  - Offers
  - Consolidations
  - Capital Calls
  - Rights
  - Capital Returns
  - Bonus
  - Dividends.
- Where a benchmark security is used the primary local index has been used however if a local index is not available then the US S&P 500 is used.
- Returns are based on adjusted data and therefore include effects from all dividends, capital returns, etc.
- The calculation used to generate the returns is simply the natural log of the price change ratio.
- Where there is insufficient data for a particular analytic, for example a new listing and the analytic requires 60 months, the analytic will be left blank or set to NAN (not a number).

## File Specifications

Each file, containing the analytics for a particular exchange, will be named –

CC\_MIC\_Market\_Analytics\_yyyymmdd.zip where -

- CC: 2 character country code, e.g. “GB” for Great Britain
- MIC: 4 character market identification code, e.g. “XLON”
- Market: General market name, e.g. “Equity”
- Analytics: Specifies what the file contains, e.g. “Analytics”
- YYYYMMDD: Date the contents pertain to, e.g. “20150713”

Note: The number of fields is not fixed and additional fields (analytics) will be added to the right of current fields without warning. Therefore, ensure your handling program will ignore any additional fields, added to the right of existing fields, until you decide how to handle them.

- Close above average: derived by comparing today's close to the appropriate average.
- Sector: derived by mapping a sector name to the sector code
- Industry group: derived by mapping industry name to the sector code.

## Customization

EDI is proud to offer the most effective and efficient solutions tailored to meet each individual customer's needs. We offer a range of customization options including:

- Delivery-based solutions to complement existing client infrastructure.
- Content provided at the geographical or portfolio holding level.
- Feeds containing particular formats, field content and integrated client level data items.

EDI uses its extensive data research expertise to source, scrub and integrate new client specified data items with existing products and services. For instance, a request from a multinational investment bank to source the DR universe and map it against its underlying share portfolio ultimately led to the development of EDI's successful Depository Receipt Database.

In addition, EDI was the first vendor to successfully launch an ISO 15022 Corporate Action Messaging feed. This enables customers to reduce costs and increase efficiency by removing the need for multiple feed handlers.

Email: [support@exchange-data.com](mailto:support@exchange-data.com)

Customer support is closed Christmas and New Year's Day.

We aim to acknowledge all queries within an hour of receipt and answer queries within 24 hours where possible.

We will send a progress report if a query is not resolved within that time-frame. We resolve around 95% of customer queries within 24 hours.

All queries sent to our Support department are filtered and dispatched to the relevant department. An IT staff member is engaged in the communication process to resolve complicated technical issues.
