

ORDERING GUIDE

NGFW/Perimeter Firewalls

Fortinet’s next generation firewalls (NGFW) deliver industry-leading enterprise security for any edge and at any scale. Powered by advanced artificial intelligence/machine learning, FortiGuard services, and the integrated Fortinet Security Fabric platform, FortiGate NGFW delivers coordinated, automated, end-to-end security policies, threat protection, and optimal user experience for today’s hybrid workforce.

CONSIDERATIONS FOR NGFW SELECTION

- Security requirements
- Throughput
- Interface connectivity
- Redundancy (WAN, power, IPsec VPN tunnels, device)
- How easy it is to migrate to Fortinet

HIGH AVAILABILITY

Each appliance needs its own license and FortiCare contract. This includes licensing for FortiCare Support, IPS, AntiVirus, Web Filtering, Mobile Malware, FortiClient, FortiCloud, and additional virtual domains (VDMs).

All FortiGates in the cluster must have the same level of licensing.

GLOBAL SERVICE LOAD BALANCING

FortiGSLB for ZTNA and VPN Load Balancing

Running globally distributed applications (whether from multiple DCs or moving to hybrid cloud solutions) comes with significant challenges when we ensure the availability of applications becomes more complex. Outages from network issues, cloud failures, or disasters can increase revenue risks and productivity losses from application outages.

FortiGSLB Cloud is a DNS-based service that helps to ensure business continuity by keeping an application online and available when a local area experiences unexpected traffic spikes or network downtime - providing high availability, scalability, and optimal performance of applications and services across geographically dispersed data centers.

By enabling One-Click GSLB, FortiGate simplifies the configuration of Fully Qualified Domain Names (FQDNs) in sync with Virtual IP (VIP) or Zero Trust Network Access (ZTNA) server features. This benefits FortiGate users who need to load-balance applications across multiple data centers based on availability or geographical factors.

Using Security Fabric Connector, you can deploy a multi-architecture solution in seconds with FortiGate "One-Click-GSLB."

Application Anywhere with FortiGate

Improve Client QoE, application latency and business continuity

Optimize Application Access:

- Publish a new FQDN in a second
- Automation via "One-Click-GSLB"
- Service Continuity
- Improve user QoE
- Multi-site visibility
- LB decision according to Geo-IP, load, latency, and application availability

NSE TRAINING AND CERTIFICATION

FCSS – Enterprise Firewall Training and Certification

Learn how to implement and centrally manage an enterprise security infrastructure composed of multiple FortiGate devices.

Course Description

For more information about prerequisites, agenda topics and learning objectives, please refer to the course description [here](#).

Ordering Information

SKU	DESCRIPTION
FT-EFW	Instructor-led Training - 3 days
FT-EFW-LAB	On-demand Labs (self-paced)
NSE-EX-FTE2	Certification Exam

FREQUENTLY ASKED QUESTIONS

What are typical licenses for customer deployments with NGFW with FortiGates?

The Unified Threat Protection (UTP) and the Enterprise bundles, which provide extensive coverage for device-, content-, and web-based threats, comprehensively cover most customer use cases.

See https://www.fortinet.com/content/dam/fortinet/assets/data-sheets/FortiGuard_Security_Services.pdf.

How is “Threat Protection” measured and what does it include?

Threat Protection performance is measured with firewall, IPS, application control, malware protection, and logging enabled.

What does the UTP license include?

The UTP license includes IPS, advanced malware protection, application control, botnet DB, mobile malware, outbreak prevention, web and video filtering, Cloud Sandbox, secure DNS filtering, antispam service, and 24x7 support.

See https://www.fortinet.com/content/dam/fortinet/assets/data-sheets/FortiGuard_Security_Services.pdf.

Do I need a license for high availability (HA) deployments?

All HA cluster members must have valid support contracts and valid licenses for FortiGuard services. Only having coverage for the primary unit is insufficient. Support contract: All units must have valid support contracts to be able open a support ticket against a specific device.

FortiGuard services: You must register and license all units in a cluster for all required FortiGuard services. This is because all cluster units communicate with the FortiGuard Distribution Network and because any cluster unit could potentially become the primary unit.

Where can I find out what transceivers a FortiGate supports?

Each FortiGate datasheet has a list of transceivers that the model supports, typically at the end of the datasheet under the Ordering information section.

How can I easily migrate from either a Third party device to Fortinet or migrate from my old FortiGate to a newer FortiGate?

FortiConverter Service provides hassle-free migration to help organizations transition from a wide range of legacy firewalls to FortiGate Next-Generation Firewalls quickly and easily. This one-time service eliminates errors and redundancy by employing best practices with advanced methodologies and automated processes. Organizations can accelerate their network protection with the latest FortiOS technology.

FortiConverter service is also part of the Enterprise Bundle and can be also bought as an ala carte SKU. As an example when migrating to a new FortiGate-80F, FortiConverter Service can be added as an ala carte SKU which is like the below. The “189” highlighted in red in the middle denotes the ala carte FortiConverter service SKU.

Do I need to install a GSLB license on FortiGate?

No additional license is required on the FortiGates. However, the FortiGSLB license should be registered on the same account as the one with the FortiGates.

FC-10-F80FP-189-02-DD FortiConverter Service for one time configuration conversion service
