Application delivery in the cloud: Discover the value of cloud migration

Application Delivery Management

The rise of Software as a Service

Software as a Service (SaaS) is rapidly replacing traditional software deployment. Why are so many moving to the cloud?

- IT needs to code faster, with no wait.

- There is pressure to deliver quality apps consistently and predictably.

- The cloud optimizes limited resources, speeding application delivery.

- A hybrid environment bridges new and old technologies.

The cloud also simplifies deployment by reducing lengthy application implementation and lifecycle management schedules. And developers can keep software current without disrupting service.
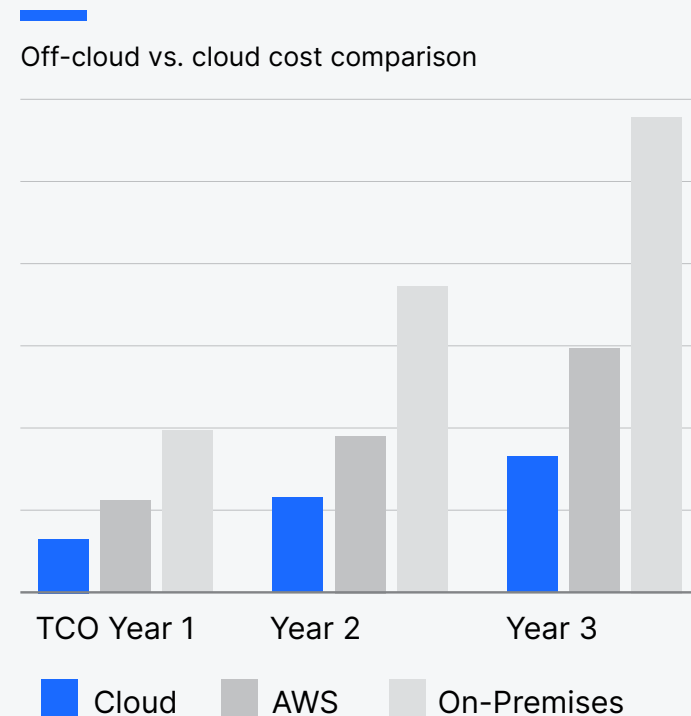

Flexibility is a draw too. You can scale cloud use as fast and as much as needed—without replacing infrastructure or adding staff. Subscription-based cloud pricing keeps costs consistent or lower than piecemeal or homegrown software.

Why move
to the cloud?

Here are a few reasons to consider:

• Get what you need when you need it.

• Manage new and old services easily and quickly.

• Stay on the latest software without delays or upgrade hassles.

• Rely on proven security and certification.

Cloud provides the agility to adjust to actual service consumption patterns based on ever-changing business needs. You can consistently optimize existing IT investments and adopt next-generation cloud products without risk.

What sets OpenText apart?

OpenText SaaS solutions give you all the benefits above—and more. Through fast provisioning, we'll have you up and running quickly.

With our SaaS Products, you'll:

|		
Reduce total cost of ownership.	See a faster time-to-value for IT initiatives—in days or weeks instead of months.	Stay license compliant— subscriptions have global usage rights.

The OpenText cloud ecosystem

Network Configuration	Product R&D-PM	Delivery Operations	Customer Success Managers		Audience
Micro Focus Shared Infrastructure	**Cloud Platform**				Customers
Micro Focus Private Cloud	Support	Customer Onboarding	Upgrades	software. microfocus.com	Partners
3rd Party Public Cloud	App Management	Order Fulfilment	Business Insights	MyAccount	
	DB Management	Identity Management	DR & Backup	User Management	
	Monitoring	Notifications	Security	SaaS Community	
	Platform APIs				

Top six reasons to choose OpenText

1
Time and resource saver

No need to waste time and resources with lengthy, error-prone upgrades. We perform all upgrades automatically.

2
Version currency

Get the latest enhancements and features as soon as they're available.

3
Available anywhere

Cloud products are available anywhere you have internet access.

4
Flexible licensing and reporting

Consume what you need when you need it. But only pay for what you use. Cloud customers enjoy extensive usage reports and statistics to help them monitor and plan future consumption.

5
Security

OpenText cloud stays protected with robust security and complies with industry standards. Plus, extensive business continuity and disaster recovery plans keep your business running.

6
Dedicated support

OpenText provides 24×7 support for its SaaS infrastructure and products.

Our cloud portfolio

The OpenText [Application Delivery Management (ADM)](#) portfolio features cloud-based, integrated software solutions. They enable IT and business teams to accelerate delivery and ensure quality and security at every stage of the application lifecycle.

Manage the application lifecycle

OpenText™ ALM Quality Center

Our [quality management platform](#) includes test planning and execution across the application lifecycle. Deliver high-quality applications on time and ensure that they meet your business requirements. With traceability and visibility into lifecycle data, you can maximize efficiency, streamline processes, and achieve faster delivery.

Conduct comprehensive functional testing

OpenText™ UFT Digital Lab

Promote an enhanced user experience across all digital touchpoints. UFT Digital Lab is an [enterprise-level, end-to-end lab of distributed mobile devices and emulators](#). Your teams can develop, debug, test, monitor, and optimize multiplatform and omnichannel mobile applications.

Manage portfolio investments and requirements

OpenText™ Project and Portfolio Management (PPM)

Drive business value through [comprehensive portfolio optimization and management](#). PPM ensures projects satisfy goals and are on time and within budget. By aggregating and prioritizing demands, organizations can maximize resources, track costs, and gain insights to handle complex challenges.

Develop quality software in less time

OpenText™ ALM Octane™

Gain a comprehensive [DevOps management solution](#) across your entire application lifecycle. ALM Octane accelerates Agile transformations for high-quality application delivery at enterprise scale while leveraging existing investments.

Test load, stress, and performance at enterprise scale

OpenText™ LoadRunner™ Cloud

[Plan, run, and scale performance tests](#) without load generators. Users can run a test in less than 10 minutes, quickly scale to more than five million virtual users, and identify problems faster with predictive analytics and reporting.

OpenText™ LoadRunner™ Enterprise

Leverage a [collaborative performance testing platform](#) for globally distributed teams. Users can plan, manage, and execute tests across concurrent projects. Gain efficiencies with 24×7 web access to testing operations.

Introducing Cloud Flex

Each of our products comes with Cloud Flex, our adaptable subscription model. As your business grows, your subscription needs change. Rather than locking you into a fixed-term configuration and rigid contract, Cloud Flex lets you adjust your subscription.

How does it work?

Mix and match your subscriptions within a single Cloud Flex contract. Throughout the prepaid contract, consumption is deducted from the available Cloud Flex Credits.

Determining Cloud Flex Credits

Cloud Flex Credits equal the payment you make to OpenText at the start of your agreement. Each month, we calculate your use and adjust available Cloud Flex Credits accordingly. To determine available credits, you choose which products you want to use now and which you might use later on. You can then decide how long you would like the Cloud Flex agreement to last.

Monthly consumption

Seven days before each month starts, your customer success manager helps you choose which cloud services you want to activate, deactivate, or continue using.

Cloud migration made easy

Now that you know the benefits of moving to the cloud, we can help you get there. Dedicated experts will guide you through each step:

1. Evaluate

how cloud migration benefits your organization.

2. Build

a customized map for what you need to migrate and how long it will take.

3. Perform

a trial run to validate that we've met your expectations.

4. Transition

all assets to the cloud.

5. Educate

users on the new platform.

6. Solve

any problems before using the platform.

Ready to reap the benefits of the cloud?

**We're ready to sign on as your partner.
Our solutions help your business stay:**

✓ ## Reliable

With more than 15 years of running mission-critical enterprise-grade solutions, OpenText serves many Fortune 500 companies. They choose us because we deliver 99.9% service level availability through robust, multi-tenanted, global data centers.

✓ ## Agile

Our responsive 24×7 service operations center (SOC) supports on-demand cloud solutions that scale up securely. We provide an engaging user experience that advocates self-service consumption in the cloud.

✓ ## Efficient

We help you optimize resources with a pay-for-use model that lowers operational costs while protecting investments through a strong, extensible suite of API integrations. OpenText customer success managers facilitate end-to-end cloud migration for rapid provisioning, minimizing day-to-day management complexity. Trusted advisors assist in the configuration of cloud offerings for seamless, hassle-free upgrades.
