Persistent

Core IT Modernization

Cloud Account Management Portal

With enterprises rapidly embracing multiple clouds, keeping tabs on all accounts across various cloud providers becomes complicated. It's difficult to keep security and access policies consistent across cloud providers, and the complexity of multi-cloud can lead to security gaps and a larger attack surface. In fact, enterprises often lack a 360-degree view of their infrastructure across clouds, which makes keeping track of assets, performance, costs, and metrics a steep challenge. What's more, orchestrating cloud services to meet specific business process and accelerator needs ends up being a slow process across a diverse cloud environment.

Persistent's Cloud Account Management Portal

Persistent's Cloud Account Management Portal offers a single interface to manage all your needs across cloud providers such as Google, Amazon, and Azure. The portal gives you a bird's eye view of all your cloud assets, helping you track cost and performance across all cloud providers through a central window without the hassle of switching between individual cloud management tools. With its identity access management and continuous threat detection, the portal helps you eliminate unauthorized access, accelerate issue detection, and improve your cloud security posture. It's one touch deployment templates such as the domain-based contact center template and VDI with file sharing template lets you quickly deploy business applications across clouds.

How it Works

Process Flow

1 Discovery (Advisory Phase)

\ Central organization
\ Account creation / migration
\ Identify fundamental OU (FOU) account
\ Additional OU based on account level compliance
\ Account — control policies security audit
  - Service control policies (SCPs)
  - Account auditing
\ Cost explorer

2 Portal Framework

\ New account
  - Customer account creation
  - Move customer account under FOU / additional OU
  - Apply customize SCPs
\ Existing account
  - Test and apply customize SCPs
  - Move to FOU / additional OU
  - Account security auditing

3 Portal Governance

\ Continuous threat detection monitoring
  - Malware detection
  - Intrusion detection
  - Software assessment — host and network level
\ Scheduled security auditing
  - Identify access management
  - Logging
  - Monitoring
  - Networking

4 Billing and Cost Advisory

\ Resource tagging
\ Resource utilization
\ Pro-active alerts
  - Underutilized resources
  - Over utilized resources
  - Unnecessary storage / backup resources
  - Inactive running resources

5 Key Benefits

\ Fully automated central governance and management across accounts
\ Control access and permissions
\ One click-audit, monitor and secure environment
\ Centrally managed cost and billing
\ Trusted advisory
